Payment of Fee

(Only complete if Applicant elects to pay the fee set forth in 37 CFR 1.17(p))

- ☐ A check in the amount of _____ is attached.
- ☒ The Director is hereby authorized to charge and credit Deposit Account No. 02-2712 as described below.
- ☐ Charge the amount of _____
- ☐ Credit any overpayment.
- ☒ Charge any additional fee required.
- ☐ Payment by credit card. Form PTO-2038 is attached.

WARNING: Information on this form may become public. Credit card information should not be included on this form. Provide credit card information and authorization on PTO-2038.

Certificate of Transmission by Facsimile*

I certify that this document and authorization to charge deposit account is being facsimile transmitted to the United States Patent and Trademark Office (Fax. No. _____)

**CONCISE EXPLANATION OF
THE RELEVANCE OF NON-
ENGLISH LANGUAGE REFERENCE
LISTED ON THE INFORMATION
DISCLOSURE STATEMENT
PURSUANT TO 37 CFR 1.98(a)(3)(i)**

Commissioner for Patents
P.O. Box 1450
Alexandria, Virginia 22313-1450

Dear Sir:

In addition to PTO Form 1449 that has been submitted herewith with respect to the above-identified application, and pursuant to 37 CFR 1.98(a)(3)(i), the applicant provides the following concise explanation of the relevance of the non-English language reference identified below:

<u>Document No.</u>	<u>Date</u>	<u>Country</u>
JP 2003273625 A	09/2003	Japan
JP 2003269990 A	09/2003	Japan

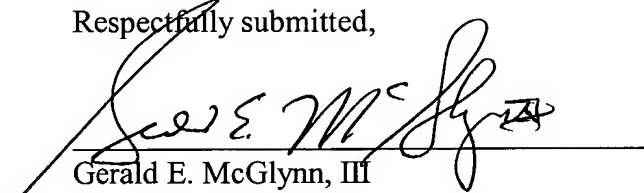

The above-identified patents were cited in a Great Britain Search Report dated 18 March 2005. A copy of the Search Report is transmitted herewith.

Japanese Patent Publication No. JP 2003273625 A discloses a window glass mounted antenna for a vehicle which is adapted to received satellite electromagnetic waves of different frequencies such as frequency modulated (FM) radio broadcasts and television (TV) broadcasts from satellites such as satellite radio, or GPS satellite. The glass mounted antenna includes an

electroconductive filament 7 extending from a feeding point 4 of a cathode and another electroconductive filament 6 which extends from a feeding point 3 of an anode. The electroconductive filament 7 controls the phase of the antenna 2 by adjusting its length with respect to the length of the electroconductive filament 6. The length is adjusted such that the sum total length is $\frac{1}{4}$ wavelength.

Japanese Patent Publication No. JP 2003269990 A discloses a mobile telephone system for detecting the position of a vehicle using global positioning system (GPS) information. The system includes an information processor 8 that determines the position of the vehicle based on the GPS information acquired from a satellite 2 and the movement information of the vehicle. A map data supply unit 12 supplies map data to map data acquisition unit 9 of the mobile telephone 1, based on map data requirement information. A display 11 displays the position of the vehicle based on the map data and output of the information processor 8.

Respectfully submitted,

A handwritten signature in black ink, appearing to read "Gerald E. McGlynn, III", is written over a horizontal line.
